(54) Title: IMAGE PROCESSING DEVICE FOR PROCESSING X-RAY IMAGES

(57) Abstract: The invention relates to an image processing device for processing X-ray images, in particular mammography X-ray images, and also to a corresponding X-ray device, to a method for this and to a computer program or computer program product. In the image processing device, display images are created from X-ray images which show at least two spatially separate objects such as a marker and a mamma. Part-images which show the respective objects are determined in the X-ray images and the part-images are arranged in the display images. The size of the display images is such that the part of the display images that is free of the part-images is smaller than the corresponding part of the X-ray images.
